Project Report Format

LEARNING ADVANCED BREAST CANCER PREDICTION WITH DEEP

INTRODUCTION

Deep and machine learning models aid in the detection of breast cancer. The aim of the research work is to encourage medical research and the development of technology by employing deep learning models to recognize cancer cells that are small in size

2. IDEATION & PROPOSED SOLUTION

    2.1 Problem Statement Definition

Customer Problem Statement Template:

Breast cancer is one of the main causes of cancer death worldwide. Early diagnostics significantly increases the chances of correct treatment and survival, but this process is tedious and often leads to a disagreement between pathologists
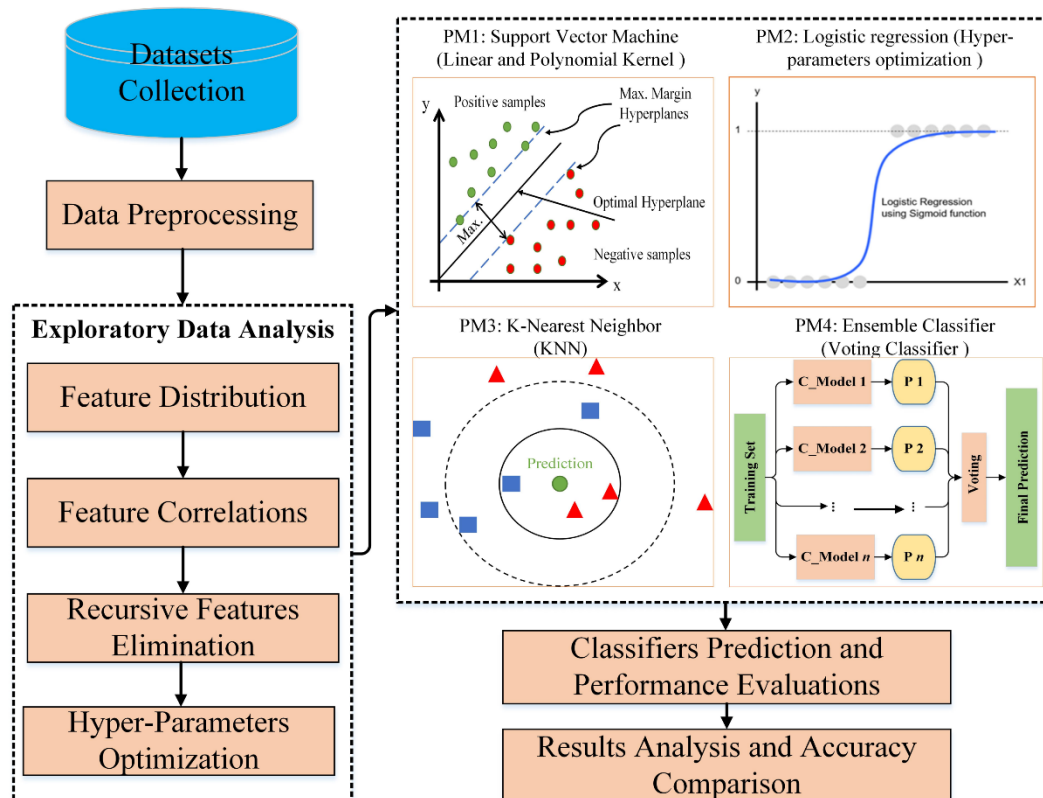

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Person-1	Live like normal human	Surrounding	Inferiority complex	Disable person
PS-2	Person-2	Great racer	Vision problem	Basic need in racing	To forget my ambition
PS-3	Person-3	Police	Vision disability	Physical requirement	I cannot be a save people
PS-4	Person-4	driver	Improper vision	Can't drive a vehicle	I not a proper driver

PS-5	Person-5	Student	Blind by birth	Gene problem	I am not fell like normal

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

WHO are we empathizing with?
Who is the person we want to understand?
What is the situation they are in?
What is their role in the situation?

GOAL

What do they need to DO?
What do they need to do differently?
What job(s) do they want or need to get done?
What decision(s) do they need to make?
How will we know they were successful?

role model

social worker

Museum educator

Social worker

What do they HEAR?
What are they hearing others say?
What are they hearing from friends?
What are they hearing from colleagues?
What are they hearing second-hand?

What do they THINK and FEEL?

PAINS
What are their fears, frustrations, and anxieties?

GAINS
What are their wants, needs, hopes, and dreams?

extra careful in areas of low light.

Diabetic Retinopathy

Night Blindness

Eyestrain

treat without surgery

clear vision

Double vision

Red eyes could be a symptom of another eye condition, like conjunctivitis (pinkeye) or sun damage

What do they SEE?
What do they see in the marketplace?
What do they see in their immediate environment?
What do they see others saying and doing?
What are they watching and reading?

when you overuse your eyes.

Red Eyes

Peacefull life

Some people are born with this problem

What other thoughts and feelings might influence their behavior?

What do they SAY?
What have we heard them say?
What can we imagine them saying?

Their confidence level increased now days

they compete in this world

They are not ashamed of having visual impairment

They do not always need acute supervision.

What do they DO?
What do they do today?
What behavior have we observed?
What can we imagine them doing?

work with more confidence

ready to face any situation

remove inferiarity comple

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm

Write down any ideas that come to mind
that address your problem statement.

🕐 10 minutes

TIP

You can select a sticky note
and hit the pencil (switch to
sketch) icon to start drawing!

Person 1

Tear glands are not able to make enough tears	Difficulty to see in low light	It is an inflammation of the conjunctiva

Person 2

Uncorrected refractive error is a preventable	tiredness in the eyes	Floaters

Person 3

Blurred vision	Change in vision or sudden loss of vision	Watery and red eyes

Person 4

Artificial tears	Eyeglasses	Refractive surgery

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all
sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is
bigger than six sticky notes, try and see if you and break it up into smaller sub-groups.

🕐 20 minutes

TIP

Add customizable tags to sticky
notes to make it easier to find,
browse, organize, and
categorize important ideas as
themes within your mural.

# Step-3: Idea Prioritization

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Breast cancer is one of the main causes of cancer death worldwide

2.	Idea / Solution description	Surgery is usually the first type of treatment for breast cancer
3.	Novelty / Uniqueness	The most unique quality of cancers is their tenderness of compassion
4.	Social Impact / Customer Satisfaction	A sense of isolation is common after cancer .you might find emotional support in counsilling ,a support group or faith community
5.	Business Model (Revenue Model)	The McGrath model of care naturally existing or artificially
6.	Scalability of the Solution	Surgery an operation where doctors cut out cancer tissue.

REQUIREMENT ANALYSIS

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIN Registration through Facebook
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP Confirmation via Call
FR-3	Completion the profile	Fill the Name Fil the Age Fil the Gender Fill the Eye problem
FR-4	Continue with	10 Image Detection free trial Continue with membership
FR-5	Upload the Images of Affected Eye	Upload the affected eye images in our app
FR-6	Image Processing	AI is detect and identify the eye problem wait for few minutes
FR-7	Report generation	Free version of report- Disease name Details about disease

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	Available in all languages around in India
NFR-2	**Security**	User data bases are encrypted in our own data centre
NFR-3	**Reliability**	Frequently gives update to resolve the bug in our App
NFR-4	**Performance**	Users can access the App whenever internet speed is low
NFR-5	**Availability**	We can fulfil the requirements of user experience
NFR-6	**Scalability**	Our App traffic limit must be 500000 users at a time

PROJECT DESIGN

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Fig. 2. Block Diagram for BCD model

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.

- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram:
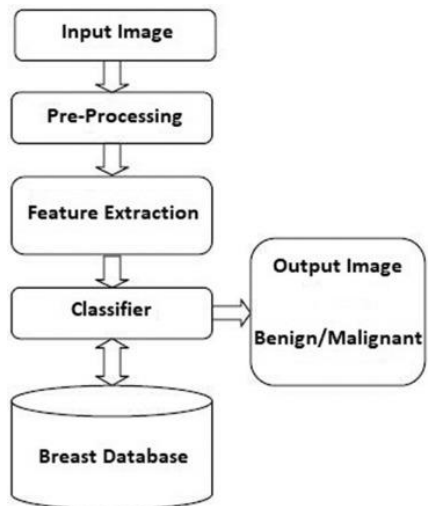

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance crit...
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my ... dashboard
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive conf... email & click conf...
		USN-3	As a user, I can register for the application through Facebook	I can register & a... dashboard with F... Login
		USN-4	As a user, I can register for the application through Gmail	I can register thr... gmail
	Login	USN-5	As a user, I can log into the application by entering email & password	Give login using c...
	Dashboard	USn-6	I cannot download result after image processed.	I need history op... my dashboard
Customer (Web user)	login	USN-7	As a user I login every time in browser	Give the keep me... in option.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance crit
	Multiple login	USN-8	Need multiple device login option	I need this option download my res
	Doctor recommendation	USN-9	Give doctor recommendation	Give perfect doct
Customer Care Executive	Need importance	USN-10	Give importance for both customer	Improve in custor
Administrator	advertisement	USN-11	Make advertisement	Spend in advertis

4. **CODING & SOLUTIONING (Explain the features added in the project along with code)**

  Predict

Eye Disease Prediction

Through this project we will be able to classify the type of Eye Disease. This project is build by using Transfer Learning.Transfer learning is a research problem in machine learning (ML) that focuses on storing knowledge gained while solving one problem and applying it to a different but related problem.

7 ADVANTAGES AND DISADVANTAGES

7.1 ADVANTAGES

1. Reduction in Human Error

One of the biggest advantages of Artificial Intelligence is that it can significantly reduce errors and increase accuracy and precision. The decisions taken by AI in every step is decided by information previously gathered and a certain set of algorithms. When programmed properly, these errors can be reduced to null.

Example:

An example of the reduction in human error through AI is the use of robotic surgery systems, which can perform complex procedures with precision and accuracy, reducing the risk of human error and improving patient safety in healthcare.

2. Zero Risks

Another big advantage of AI is that humans can overcome many risks by letting AI robots do them for us. Whether it be defusing a bomb, going to space, exploring the deepest parts of oceans, machines with metal bodies are resistant in nature and can survive unfriendly atmospheres. Moreover, they can provide accurate work with greater responsibility and not wear out easily.

Example:

One example of zero risks is a fully automated production line in a manufacturing facility. Robots perform all tasks, eliminating the risk of human error and injury in hazardous environments.

3. 24x7 Availability

There are [many studies](#) that show humans are productive only about 3 to 4 hours in a day. Humans also need breaks and time offs to balance their work life and personal life. But AI can work endlessly without breaks. They think much faster than humans and perform multiple tasks at a time with accurate results. They can even handle tedious repetitive jobs easily with the help of AI algorithms.

Example:

An example of this is online customer support chatbots, which can provide instant assistance to customers anytime, anywhere. Using AI and natural language processing, chatbots can answer common questions, resolve issues, and escalate complex problems to human agents, ensuring seamless customer service around the clock.

4. Digital Assistance

Some of the most technologically advanced companies engage with users using digital assistants, which eliminates the need for human personnel. Many websites utilize digital assistants to deliver user-requested content. We can discuss our search with them in conversation. Some chatbots are built in a way that makes it difficult to tell whether we are conversing with a human or a chatbot.

We all know that businesses have a customer service crew that must address the doubts and concerns of the patrons. Businesses can create a chatbot or voice bot that can answer all of their clients' questions using AI.

5. New Inventions

In practically every field, AI is the driving force behind numerous innovations that will aid humans in resolving the majority of challenging issues.

For instance, recent advances in [AI-based technologies](#) have allowed doctors to detect breast cancer in a woman at an earlier stage.

Example:

Another example of new inventions is self-driving cars, which use a combination of cameras, sensors, and AI algorithms to navigate roads and traffic without human intervention. Self-driving cars have the potential to improve road safety, reduce traffic congestion, and increase accessibility for people with disabilities or limited mobility. They are being developed by various companies, including Tesla, Google, and Uber, and are expected to revolutionize transportation.

7.2 DISADVANTAGES

1. High Costs

The ability to create a machine that can simulate human intelligence is no small feat. It requires plenty of time and resources and can cost a huge deal of money. AI also needs to operate on the latest hardware and software to stay updated and meet the latest requirements, thus making it quite costly.

2. No Creativity

A big disadvantage of AI is that it cannot learn to think outside the box. AI is capable of learning over time with pre-fed data and past experiences, but cannot be creative in its approach. A classic example is the bot Quill who can write [Forbes earning reports](#). These reports only contain data and facts already provided to the bot. Although it is impressive that a bot can write an article on its own, it lacks the human touch present in other Forbes articles.

3. Unemployment

One application of artificial intelligence is a robot, which is displacing occupations and increasing unemployment (in a few cases). Therefore, some claim that there is always a chance of unemployment as a result of chatbots and robots replacing humans.

For instance, robots are frequently utilized to replace human resources in manufacturing businesses in some more technologically advanced nations like Japan. This is not always the case, though, as it creates additional opportunities for humans to work while also replacing humans in order to increase efficiency.

4. Make Humans Lazy

[AI applications](#) automate the majority of tedious and repetitive tasks. Since we do not have to memorize things or solve puzzles to get the job done, we tend to use our brains less and less. This addiction to AI can cause problems to future generations.

5. No Ethics

Ethics and morality are important human features that can be difficult to incorporate into an AI. The rapid progress of AI has raised a number of concerns that one day, AI will grow uncontrollably, and eventually wipe out humanity. This moment is referred to as the AI singularity.

8 CONCLUSION

Artificial intelligence has the potential to transform all organizations. The process by which this transformation happens can vary, but the steps will tend to follow the roadmap we have listed in this book. Following all the steps outlined in the previous chapters will enable your organization to implement and excel in the use of AI technology. AI holds the key to unlocking a magnificent future where, driven by data and computers that understand our world, we will all make more informed decisions. These computers of the future will understand not just *how* to turn on the switches but *why* the switches need to be turned on. Even further, they may one day ask us if we need *switches* at all.

Although AI cannot solve all your organization's problems, it has the potential to completely change how business is done. It affects every sector, from manufacturing to finance, bringing about never before seen increases in efficiency. As more industries adopt and start experimenting with this technology, newer

applications will be invented. AI will bring a change even more widespread and sweeping than the introduction of computing devices. It will change the way we transact, get diagnosed, perform surgeries, and drive our cars. It is already changing industrial processes, medical imaging, financial modeling, and computer vision. We are well on our way to tapping into this enormous potential, and as a result, the future holds better decision-making potential and faster, ...

9 FUTURE SCOPE

The future of <u>Artificial Intelligence</u> is bright in India, with many organizations opting for AI automation. It is essential to understand the recent developments in AI to find suitable job roles based on your competencies.

The scope of Artificial Intelligence is limited to domestic and commercial purposes as the medical and aviation sectors are also using AI to improve their services. If AI is outperforming human efforts, then opting for AI automation will reduce costs in the long run for a business.

Automation in operational vehicles has created a buzz in the logistics industry as it is expected that automated **trucks/vehicles** may soon be used.

Due to the bright scope of Artificial Intelligence in the future, the number of AI start-ups is expected to increase in the coming years. Indicating the opportunities, the number of AI start-ups in India has increased significantly.

Moreover, India's talent gap for specialist AI developers is huge, and AI experts are needed by businesses more than ever. Businesses don't want to miss out on any technology that can revolutionize their business processes.

10 APPENDIX

10.1 SOURCE CODE

```
import numpy as np
import os
